Scan to Digitech

Overview:

Lexmark Scan to Digitech is an embedded MFP application that simplifies document insertion into Digitech Systems ImageSilo and PaperVision Enterprise content management systems.

Includes:

Document Insertion – scans document into digital format and inserts image into the content management system.

Indexing– permits users to manually enter indexing information or the image at the MFP using the e-Task interface.

Confirmation – notifies the user via printed page, e-Task message and/or e-mail when the image has been inserted into the content management system.

Scan Preview – gives users a visual preview of the scanned image before inserting the document into the content management system.

Workflow Specific Shortcuts – allows administrators to create an icon on the e-Task interface dedicated to a specific task.

Getting Started:
