Understanding letters after model numbers

Some Lexmark™ printers may have one or more letters after the model number to indicate features.

Letter	Meaning
d	Duplex*
n	Network
t	Additional tray included
x	High capacity tray
e	e-Task (touch screen device)
m	Mailbox
f	Staple finishing option
p	Staple with hole punch finisher
h	Hard disk

* Duplex (two-sided) printing using an optional duplex unit or an internal duplex unit based on the product.

Printer Control Language (PCL) page formatting

For more information on PCL, see the *Printer Languages and Interfaces Technical Reference*. It contains a complete listing with descriptions of PCL commands.

To determine which PCL commands your printer supports, see [“Appendix A: PCL support” on page 21](#).

Printable areas

The printable areas and logical pages for PCL emulation (both portrait and landscape orientation) are illustrated below. See the legend that follows for definitions of areas **A** through **I**.

Legend:

A	Portrait physical page width and landscape physical page length
B	Portrait physical page length and landscape physical page width
C	Portrait logical page width
D	Landscape logical page width
E	Distance between the side edge of the physical page and the logical page in portrait
F	Distance between the side edge of the physical page and the logical page in landscape
G	Distance between the top and bottom edge of the physical page and logical page
H	Distance between the left and right edge of the physical page and the printable area in portrait, or distance between the top and bottom edge of the physical page and printable area in landscape
I	Distance between the top and bottom edge of the physical page and the printable area in portrait, or distance between the left and right edge of the physical page and the printable area in landscape

Note: The tables that follow in this chapter list the page sizes and dimensions of each area labeled on the preceding diagram for all paper and envelope sizes your printer supports.

Supported paper and envelope dimensions

The following table lists the page sizes and print area dimensions for all supported paper and envelope sizes. For more information about the printable areas and logical pages for PCL emulation, see [“Printable areas” on page 7](#).

Area dimensions for this paper are listed in pel ranges.⁵ Paper ID 99 is supported for backward compatibility with other Lexmark printers. It has the same logical paper size as ID 100 (compatible with HP LaserJet 5Si/5SiMx) but is 8 pels wider than the Lexmark 4039.**Note:** The explanation of the printable area assumes that the Print Area menu item is set to **Normal**. For more information, see "Print Area Menu Item" in the PCL chapter of the *Printer Language and Interfaces Technical Reference*.

Printer Job Language (PJL)

PJL commands information

Your printer supports complete PJL commands, including certain commands that cause the printer to enter PCL emulation, PostScript emulation, and Personal Printer Data Stream (PPDS).

For a complete listing with descriptions of PJL commands, see the *Printer Languages and Interfaces Technical Reference*.

To determine which commands your printer supports, see [“Appendix B: PJL support” on page 30](#).

PostScript (PS) emulation

Your printer supports complete PS emulation supplemental operators. For detailed descriptions of these operators, see the PS emulation chapter of the *Printer Languages and Interfaces Technical Reference*.

To determine which commands your printer supports, see [“Appendix C: PostScript support” on page 87](#).

¹ This is a Japanese Industry Standard (JIS) paper size. The same named designation is used by the JIS and International Organization for Standardization (ISO) for different paper sizes.

² This is a Lexmark-unique paper size.

³ This is an official PostScript paper size.

PostScript paper tray support

When the printer receives one of the operators listed in ["Tray selected with tray operators" on page 11](#), it performs the actions listed in this section. This paper tray selection process ends when a suitable paper source is chosen and paper is fed from that source.

- The printer checks the value of **manualfeed** in **statusdict** and the **ManualFeed** page device parameter. If either one is true, then the printer sends a message to load the requested size in the manual feeder or multipurpose feeder.
- The **PageSize Policy** is set to **0** by means of **setpagedevice**.
- The printer checks the paper size loaded in the current active source to determine if it matches the requested size. If the sizes match, then the paper is fed from the active source.

Note: The current active tray is the last source that was selected from the control panel or by the printer language.

- If the requested size and the size loaded in the active source do not match, then the sources are searched in the order defined by the **Priority** array in the **InputAttributes** dictionary in the **pagedevice** dictionary.
- If the requested media size is not found by the previous search, then the following search order is used:
 - Tray 1
 - Tray 2
 - Tray 3
 - Multipurpose feeder
 - Tray 4
- If the requested size cannot be located in any automatic source, then a **configurationerror** is issued and the job is flushed.

For printers that support automatic two-sided printing (duplexing):

- All papers, except custom-size paper and envelopes, are supported for duplexing in the multipurpose feeder.
- If the paper source is changed before the back side of a two-sided page prints, then a blank back page prints, the paper source changes, and the information for the back side of the page is printed on the front side of a page sent from the new paper source.

When these operators are used, it is equivalent to executing the following PostScript emulation sequence:

```
<< /PageSize [x y] /ImagingBBox null /Policies << /PageSize 0 >> >>
setpagedevice
```

where **x** and **y** are the **PageSize** in points.

PostScript envelope size support

The literal names in [“Envelope sizes supported” on page 12](#) are also supported as operators in **userdict**. These operators change the image size but not the active paper source. Therefore, when these operators are used, part of the image may be clipped.

When these literal names are used as operators, it is equivalent to executing the following PS emulation sequence. The following example uses a 3.875 x 7.5-inch envelope.

PostScript envelope tray support

The envelope tray the printer selected when it receives an **envelopetray** operator is listed in [“Envelopetray operator selections” on page 14](#).

Printer action when manualfeed is false

The printer sets the PageSize Policy to **0** if **manualfeed** in **statusdict** and the **ManualFeed** page device parameter are false.

The printer checks and compares source tray size settings between printer and print job data stream.

Envelope setting	Printer action
Envelope size settings match	The printer pulls the envelope.
Envelope size settings do not match	The printer searches sources in the order defined by the Priority array in the InputAttributes dictionary in the pagedevice dictionary. If search cannot find the requested media size, then the following search order is used: <ul style="list-style-type: none">• Envelope feeder• Multipurpose feeder
Requested size and type are not available from any automatic source	You are prompted to load the requested envelope size and type in the manual feed source. If the size is still not available, then a configurationerror is issued, and the print job is flushed.

Printer action when manualfeed is true

The printer prompts you to load the requested size manually if **manualfeed** or **ManualFeed** is true. If no manual feed exists on the printer, then a **rangecheck** error message is issued.

These operators are equivalent to executing the following PS emulation sequence:

```
<</PageSize [x y] /ImagingBBox null /Policies<</PageSize 0>> >>
setpagedevice
```

where **x** and **y** are the **PageSize** in points.
