Lexmark Security Advisory:

Revision: 1.1
Last update: 19 July 2021
Public Release Date: 2 October 2014

Summary
Bash Shellshock Vulnerability

Lexmark has learned of a series of vulnerabilities in the open-source bash shell program that allows an attacker to execute arbitrary commands on a vulnerable system.

No Lexmark devices or software products are affected by this vulnerability.

References

Details
On September 24th, 2014 a series of vulnerabilities, commonly referred to as “Shellshock” was announced in the open-source software package bash. The vulnerability allows for arbitrary code execution on affected systems.

Vulnerability Scoring Details (CVE-2014-6271)
CVSS Base Score 10
Impact Subscore: 10
Exploitability Subscore: 10

Exploitability:
Access Vector: Network
Access Complexity: Low
Authentication: None

Impact:
Confidentiality: Complete
Integrity: Complete
Availability: Complete

CVSS scores are calculated in accordance with CVSS version 2.0 (http://www.first.org/cvss/cvss-guide.html)

Impact
No Lexmark devices or software products are affected by this vulnerability. But customers should confirm that bash is patched for this issue on any system on which Lexmark software is installed.

Unaffected Products
Lexmark devices and software products are not affected by this vulnerability.

Affected Products
No Lexmark devices or software products are affected by this vulnerability.
Exploitation and Public Announcements
Lexmark is aware of unconfirmed reports of malicious use of the vulnerability described in this advisory.
